

Olivier Hanotte is a Professor of Genetics at the University of Nottingham (UK), Principal Scientist at the International Livestock Research Institute (ILRI) in Addis Ababa, Ethiopia and the Center of Tropical Livestock Genetics and Health (CTLGH, UK). He has also worked in Belgium, Kenya, and Brazil, with extensive collaborations in the Republic Popular of China and South Korea. With over 25 years of experience in studying tropical livestock genetics, genomics and adaptation, he has authored more than 200 scientific papers on various livestock species including cattle, chicken, sheep, goats, pigs, and old-world camelids. He has mentored over 25 post-graduates (MSc, PhD) students and trained many young scientists worldwide. He has been advising FAO on livestock genetic diversity and has served as a Director of the Frozen Ark, as well as a past editorial board member of Animal Genetics and the Journal of Animal Breeding and Genetics. Olivier's first participation in an ISAG conference was at Interlaken in 1992 as a PhD student.

Apart from his interest in livestock diversity, he is an avid birdwatcher and has a keen interest in wildlife.
